TENTELOG

FOUR SEASONS OUTDOOR LIVING AREAS

ABOUT US

As TenteLog (Four Seasons Outdoor Living Spaces) company, we aim the vision of providing services to our customers with the right technologies at home and abroad. TenteLog provides services for people's needs. TenteLog constantly improves itself. Also we are innovative and responsible company. There are products such as Pergola, Bioclimatic, Rolling Roof, Winter Garden, Guillotine Glass, Zip Blind in our production.

OUR VISION

Providing services to our customers with the right technologies at home and abroad. Adaptable to technological developments. Constantly improving itself, TenteLog is an innovative and responsible company.

MISSION

To provide products and services at international quality standards.

BIOCLIMATIC PERGOLA SYSTEMS

All profile components used in the system are ALUMINUM.

Aluminum profiles used in the system are 6063 - T6 F25 (7580 Briner Hardness).

The most important feature of the system is that the lamellas are corrugated inside so that dust, water etc. on the upper part do not spill down during the movement of the lamellas.

The system can be mounted flat or inclined when necessary. Since it has grooves on 4 sides, water intake is prevented without any inclination. Water is discharged from the front foot profiles. The panels work axially and have the ability to retract when desired. (This feature is important in terms of making ventilation and shading at the same time) Since the aluminum lamellas used in the system cause darkness in the space, lighting is provided by using a glass panel. (Optional.)

Metal accessories are first galvanized and then electrostatic oven painted. Lamels move comfortably and silently with the help of 628 ZZ stainless bearings.

Panels should be able to be opened at a minimum angle of 100 degrees axially. (Important to block the sunlight from the facade) The opening-closing movement of the ceiling cover can be used with the remote control and optional android or apple control. (optionally rain, sun and wind sensors provide 4-season comfort.

All aluminum profiles are painted with electrostatic powder coating technology. It moves with the T-10 timing belt between the engine and the moving mechanism.

Screws used in the system are chrome stainless. Flange application screws must be M8*80 jacketed steel dowels and galvanized coating. (In order not to damage the floor insulation)
The wicks to be used in the system are resistant to EPDM heat.
20 Dens of styrofoam foam is used within the lamellas for thermal insulation (optional and sealed adhesive is used in water insulation.)
The system to be used has 2 (two) years of engine and 2 years of mechanical warranty.
Each system module consists of vertical and horizontal carrier profiles, vertical main carriers should be 128*170*3mm and horizontal main carriers 128*170*3 mm.
System modules have static properties to meet 50kg+25kg /m² distributed load and 50kg/m² wind load.
Night lighting is provided with the hidden LED application on 4 sides of the system. With the dimmer light receiver, the power can be increased or decreased.

ROLLING ROOF SYSTEMS

Rolling roof that you can apply to all places; It gives your ceilings abilities to be opened, folded and gathered. Rolling roof is a functional system that creates a very stylish appearance in spaces. Because of the the rotation of the panels around themselves, the process of adjusting the ventilation and sun rate in the spaces becomes much easier. All panels can be collected backwards by rotating around themselves. This creates a roof feature that can be opened completely. Rolling roof is a unique and special product as it is a system that can be both folded and collected. Rolling roof is the only product in the world that provides the possibility of a sunroof system. The carcass profiles used in the rolling roof application are made with special aluminum profiles. Fixed parts are charged based on the longest piece of material. In the rolling roof system, standard ral colors are used, which are equally compatible with all spaces. The best places where the rolling roof system can be applied are restaurants, cafes and similar businesses. In addition, the ceiling system is waterproof and has high-level security standards. All your guests can comfortably reach fresh air. Panels that can be opened at any time make it easy to adjust both ventilation and daylight. Likewise, it is a versatile system, as it provides shading during the tiring days of summer. Rolling roof is a waterproof product of maximum quality. The durability of the product is increased by using epoxy and buldex screws in the assembly of the carcass floor. The system works with a certain slope measure and offers users to spend comfortable time. In this way, it becomes possible to save both time and cleaning. All lighting and heating systems can be mounted on the product.

from our window.”

TENTELOG PERGOLA SYSTEMS

Pergola is a rail awning system that allows you to expand your outdoor spaces and use them for a long time. The pergola system will protect you from the sun in summer compared to other awning systems, and from the rain in rainy weather with folding and waterproof feature. With the pergola system, horizontal, twisted and roof-shaped openings can be closed with awnings. It is an important system that meets the two basic needs of restaurants and cafes. Cafes and restaurants have to consider the comfort of their customers. It is possible to provide protection with the Pergola awning during the hours when the sun is very effective.

WINTER GARDEN

It is possible to see winter gardens in many cafes or home places. The most important thing you need for this is to have a garden ready to be freed from the tiring effects of winter. You can watch the rain while sipping your hot drink in the most foggy times of winter. Or you can enjoy listening to

It is possible to see winter gardens in many cafes or home places. The most important thing you need for this is to have a garden ready to be freed from the tiring effects of winter. You can watch the rain while sipping your hot drink in the most foggy times of winter. Or you can enjoy listening to the silence of the snowfall while browsing your book. Winter garden systems are designed to offer you the most ideal place and are produced with high quality materials. Winter garden systems are equipped with rain resistant and stainless products.

GUILLOTINE SYSTEMS

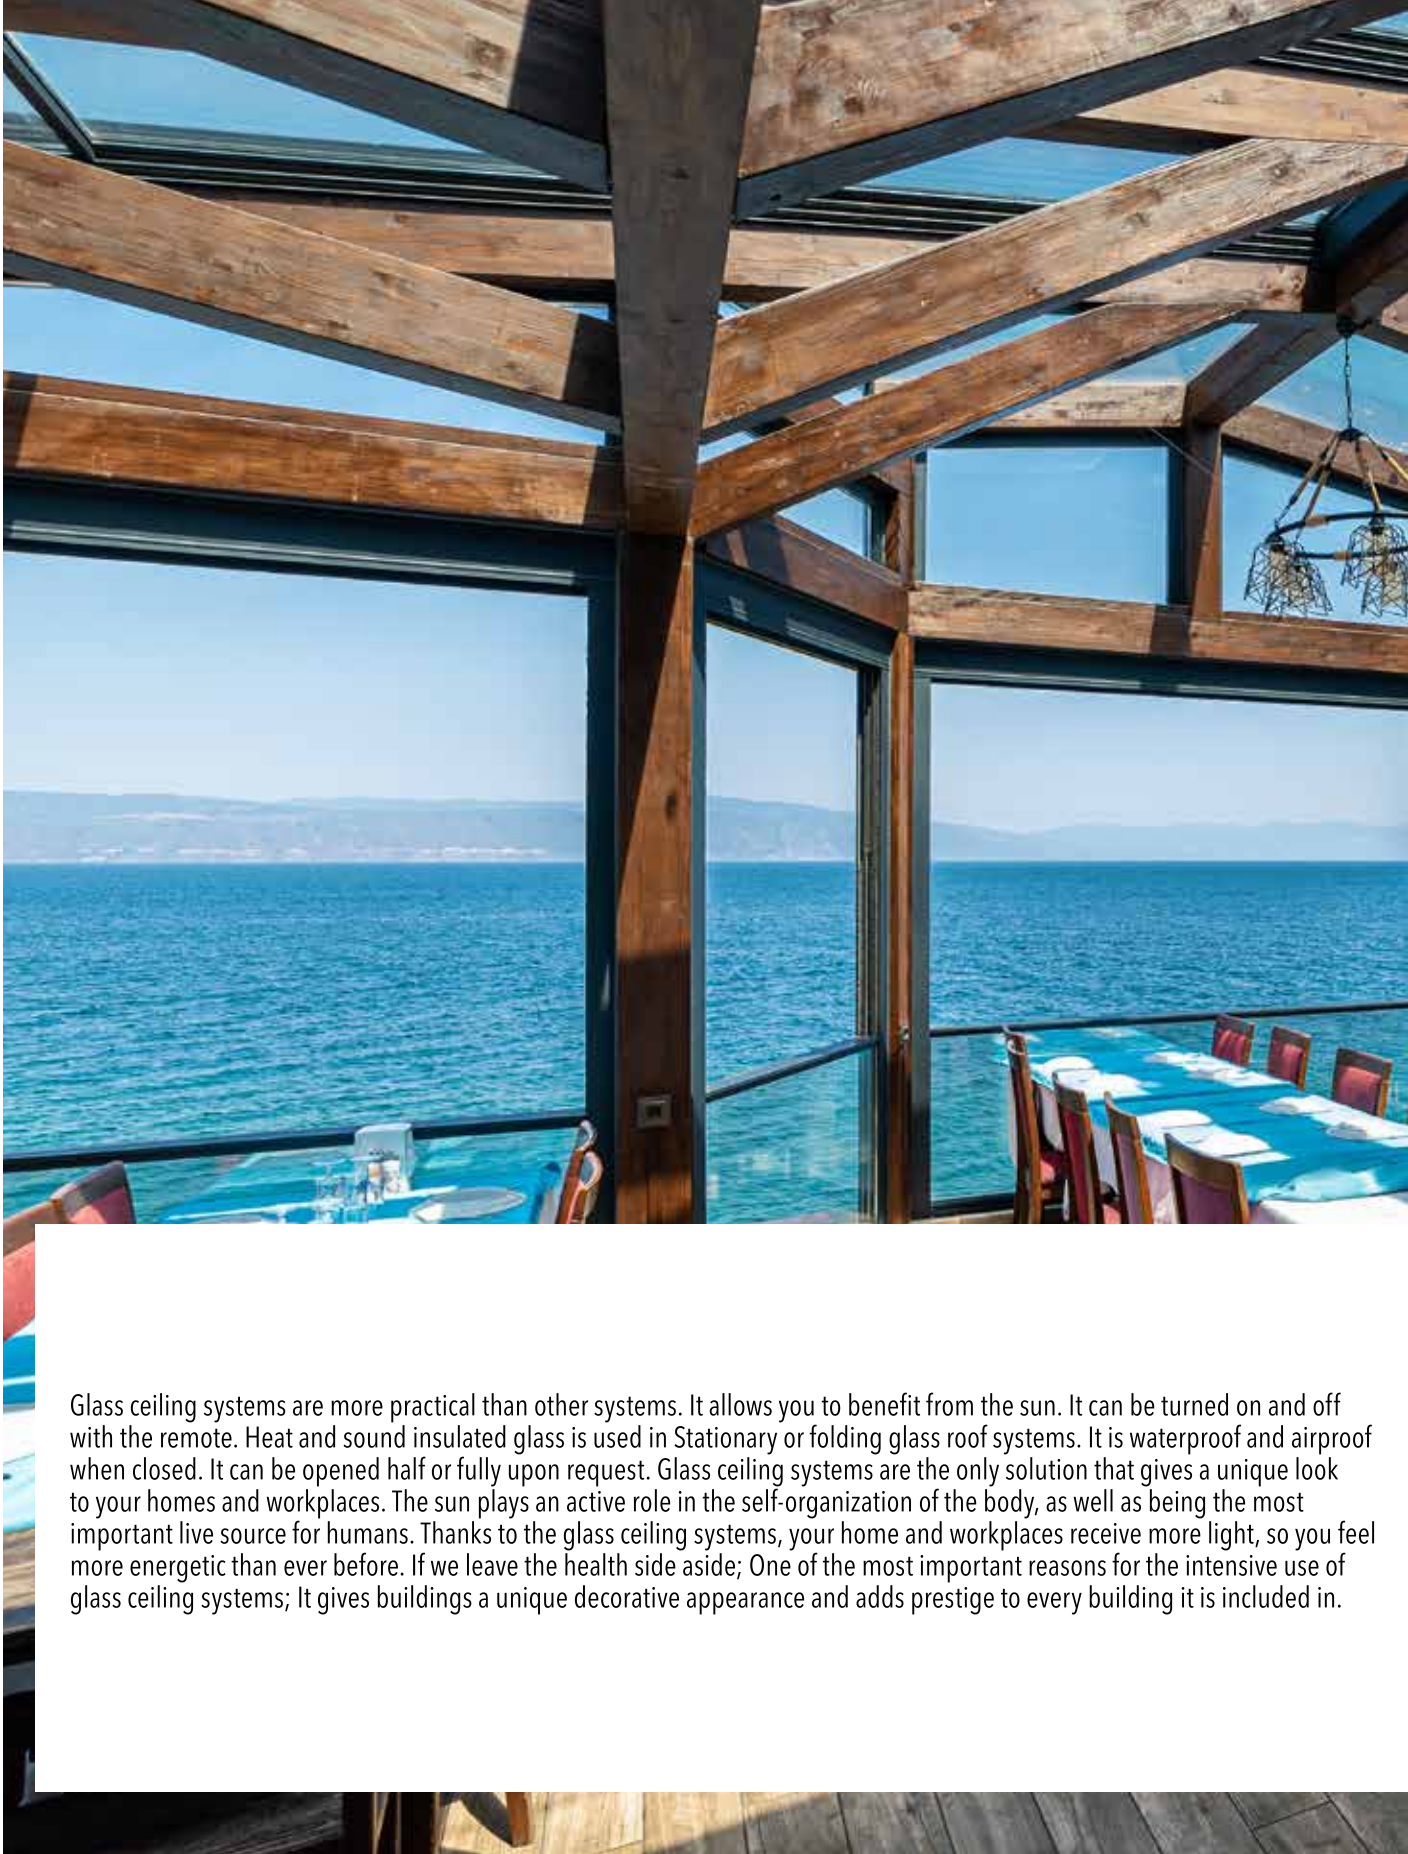

Guillotine Glass (Moving Handrail) can be used in hotels, houses, shops, restaurants, patisseries, winter gardens, terraces, etc. You can use it anywhere. It is more useful than other systems. It is designed to turn the indoor space into an open space with a click of a button. It has 3-wing insulated and single glass options. You can open half or full. The system can optionally be gathered both above and below. It is waterproof and airproof when closed. It gives near perfect results with insulated glass. Inorma Guillotine Glass (Moving Handrail System) is the quietest one compared to its peers. The reason for this is the belt and gear system we specially designed.

- The paint used in all aluminum profile components of the system is anti-fingerprint (does not leave fingerprints); It is a stain resistant paint.
- Channels where there is no movement in the side strut profiles are closed with specially designed aesthetic cover profiles.
- By minimizing the thickness of the vertical and horizontal profiles, the transparency level of the system is increased and maximum panoramic view is adjusted.
- Fully automatic system that can control all functions of the system with a single remote with Radio Frequency Technology.
- The whole system can be assembled very easily, because of segmented side strut profile and the independent motor box. When it is necessary to provide service, only the necessary places can be intervened as desired, without disassembling the system completely.
- It guarantees quiet and comfortable movement. The wheels placed on the edges of the panels move in the wheel channels on the rails, ensuring the system to move in a balance.

STATIONARY GLASS CEILING

Glass ceiling systems are more practical than other systems. It allows you to benefit from the sun. It can be turned on and off with the remote. Heat and sound insulated glass is used in Stationary or folding glass roof systems. It is waterproof and airproof when closed. It can be opened half or fully upon request. Glass ceiling systems are the only solution that gives a unique look to your homes and workplaces. The sun plays an active role in the self-organization of the body, as well as being the most important live source for humans. Thanks to the glass ceiling systems, your home and workplaces receive more light, so you feel more energetic than ever before. If we leave the health side aside; One of the most important reasons for the intensive use of glass ceiling systems; It gives buildings a unique decorative appearance and adds prestige to every building it is included in.

from our window.”

SLIDING GLASS BALCONY SYSTEMS

Thanks to the wide glass panels on your balconies which gives us a maximum view of places. With its ease of use and low threshold structure, it is the perfect solution for winter gardens and offices. Depending on your preference for single glazing or double glazing, you can adjust the insulation within optimum values in your balcony or winter garden. It eliminates the restrictions in the space, unwanted image and loss of space. It offers spacious and modern environments. Wind, rain, snow, dust, etc. It provides protection from external effects in adverse weather conditions because of its special profiles.

from our window.”

WIND BREAKER SYSTEMS

Tentelog Wind Breaker Systems help you to create a comfortable space by protecting you from the negative effects of wind in the gardens, terraces, verandas or balconies of places such as cafes, restaurants or houses. Tentelog Wind Breaker Systems with 6mm tempered movable glass move the air flow above the session level and do not allow the pleasure of sitting outdoors to be interrupted.

Maximum visibility with minimal view is provided by the moving framed glass panel. The glass panel moves 600 mm upwards, protecting it from the wind from ground level to a height of 1700 mm. Tentelog Wind Breaker Systems are suitable for manual use.

Tentelog Wind Breaker Systems can be used alone or side by side and act as a separator in open areas.

from our window.”

ZIP BLIND

If you want to buy a flexible roller blind that is easy to use, extremely strong and durable, Zip Blind will meet your needs. It is modern and aesthetic. It provides protection from the burning effect of the sun, wind and rain in sudden weather changes. The micro air perforated fabric structure circulates the fresh air continuously. Blinds, awnings, mosquito nets, roller blinds, etc. It offers all of the product functions together, The special textile fabric shows high resistance to environmental effects. It affects the final appearance of the buildings with its color variations and provides aesthetic look. It offers high standards to the user with its remote-controlled use.

“Look at the life
from our window.”

MOTORIZED CEILING BLIND

Zip Blinds, which attract attention with their easy use and are extremely durable, are blinds designed to be protected from external factors such as sun, wind and rain. Zip Blinds that draw attention with their modern and aesthetic appearance Zip Blinds, which are a technological and modern curtain, are frequently preferred in areas such as commercial enterprises, residences and shopping centers. Zip Blinds, whose main purpose is to provide protection from the negative effects of sun and wind, you can find aesthetic and rational solutions to these and similar problems. You can choose any of our Zip Blind models and apply them to your summer house, winter garden or home.
